

About this space

Flexible Arrangement Makerspace—Middle & High School

A flexible arrangement makerspace includes furniture that can be easily adapted to accommodate maker projects, STEM activities, collaborative work and project planning sessions. Since this classroom's layout can change several times a day, furnishings need to be mobile or lightweight. The flexible classroom also gives students the freedom to choose the type of workspace that's best for them. Whether students prefer traditional school chairs, soft seating or wobble stools, incorporating a variety of seating options ensures students stay comfortable throughout the day. Teachers should be able to choose the workspace configuration that fits best with the day's lessons. Rolling solutions like mobile whiteboards or storage units allow teachers and students to access tools or present ideas. Research shows that when students control their space, they are more likely to participate in class discussions or collaborations and even do better on standardized tests

Requirements for a Great Flexible Arrangement Makerspace

For **students**, the best flexible arrangement makerspace should include furnishings that keep students comfortable, so they can focus on their work. They should be able to select from a variety of workspace and seating options, have easy access to supplies and be able to move around the room with ease. Mobile or easy-to-move workstations make it simple for students to arrange themselves into large or small project groups.

For **teachers**, the flexible arrangement makerspace should be easily arranged and rearranged to demonstrate an idea to the whole class at once or to group students together for maker activities.

A variety of seating and tabletop options help teachers keep students focused and attentive throughout the day. Configurable furniture assists teachers in arranging the space to best accommodate their students' work and an easy-to-use organizational system keeps set ups and clean ups quick and simple.

For administrators, the flexible arrangement makerspace should be equipped with products that have been selected with the specific needs of their facility in mind. All products should be available when needed and must arrive on time. Installation must be quick and efficient.

Flexible Arrangement Makerspace Solutions from School Outfitters

School Outfitters' research and development team designed a flexible arrangement makerspace that caters to the needs of students and teachers alike. We've selected a variety of furnishings that work for both large and small projects. Mobile furnishings throughout the room give teachers and students the flexibility to accommodate various projects. Large project spaces, breakout spaces and project storage spaces make creating a flexible learning makerspace simple.

Large Project Spaces are designed to handle your class's biggest projects. This area includes:

- Large collaborative tables
- Stools
- · Mobile easels

Large Collaborative Tables with spacious work areas accommodate projects that require students to work with multiple components or spread out reference materials. A smooth surface allows them to double as a testing space for robotics or engineering projects. Rolling casters make it easy to move these tables around the room as needed.

Stools provide students with a sturdy seat, while the backless design offers the freedom of movement students need for project work. Stools can be pushed under the tables during standing projects or clean ups.

Mobile easels can be rolled to project areas for brainstorming or presenting ideas.

Breakout spaces accommodate individuals or small groups as they work on devices, plan projects or research topics. This area includes:

- Long tables
- Mobile chairs

Long tables provide the space students need to spread out drawings, plans, materials, devices or books.

Mobile chairs are constructed from flexible plastic to keep students comfortable as they shift positions. Rolling casters allow the chairs to be quickly moved to and from the breakout space.

Project storage spaces keep tools, materials and in-progress projects organized or acts as a display space for completed projects. This area includes:

- . Shelving units
- Mobile bin storage
- Lockable cabinet

Shelving units hold large projects, tools and materials. When items are stored in a consistent spot, students can easily identify and locate what they need.

Mobile bin storage can be rolled directly to student work areas, making distribution and collection of supplies easy. Bins make it simple to locate materials, and they can be completely removed from the unit for use at workstations. Large and small bin sizes accommodate a variety of storage needs.

A **lockable cabinet** secures tools that may require teacher supervision. It also secures valuable materials or supplies overnight.
